## Arthur-Merlin Games

- Delimiting # of rounds:
  - **AM[k]** = Arthur-Merlin game with  $k$  rounds, Arthur (verifier) goes first
  - **MA[k]** = Arthur-Merlin game with  $k$  rounds, Merlin (prover) goes first

**Theorem:** **AM[k]** (**MA[k]**) equals **AM[k]** (**MA[k]**) with **perfect completeness**.

- i.e.,  $x \in L$  implies accept with probability 1
- proof on problem set

May 23, 2023 CS151 Lecture 15

2

## Arthur-Merlin Games

**Theorem:** for all **constant**  $k \geq 2$

$$\mathbf{AM}[k] = \mathbf{AM}[2].$$

- Proof:
  - we show  $\mathbf{MA}[2] \subseteq \mathbf{AM}[2]$
  - implies can move all of Arthur's messages to beginning of interaction:

$$\mathbf{AMAMAM} \dots \mathbf{AM} = \mathbf{AAMMMAM} \dots \mathbf{AM}$$

$$\dots = \mathbf{AAA} \dots \mathbf{AMMM} \dots \mathbf{M}$$

May 23, 2023 CS151 Lecture 15

3

## Arthur-Merlin Games

- Proof (continued):
  - given  $L \in \mathbf{MA}[2]$ 

$$x \in L \Rightarrow \exists m \Pr_r[(x, m, r) \in R] = 1$$
  - order reversed
    - $\Rightarrow \Pr_r[\exists m (x, m, r) \in R] = 1$
    - $x \notin L \Rightarrow \forall m \Pr_r[(x, m, r) \in R] \leq \epsilon$
    - $\Rightarrow \Pr_r[\forall m (x, m, r) \in R] \leq 2^{|\mathcal{M}|}\epsilon$
  - by repeating  $t$  times with independent random strings  $r$ , can make error  $\epsilon < 2^{-t}$
  - set  $t = m+1$  to get  $2^{|\mathcal{M}|}\epsilon < \frac{1}{2}$ .

May 23, 2023 CS151 Lecture 15

4

## MA and AM

- Two important classes:
  - **MA = MA[2]**
  - **AM = AM[2]**
- definitions without reference to interaction:
  - $L \in \mathbf{MA}$  iff  $\exists$  poly-time language  $R$ 

$$x \in L \Rightarrow \exists m \Pr_r[(x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \forall m \Pr_r[(x, m, r) \in R] \leq \frac{1}{2}$$
  - $L \in \mathbf{AM}$  iff  $\exists$  poly-time language  $R$ 

$$x \in L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] \leq \frac{1}{2}$$

May 23, 2023 CS151 Lecture 15

5

## MA and AM

- $L \in \mathbf{AM}$  iff  $\exists$  poly-time language  $R$ 

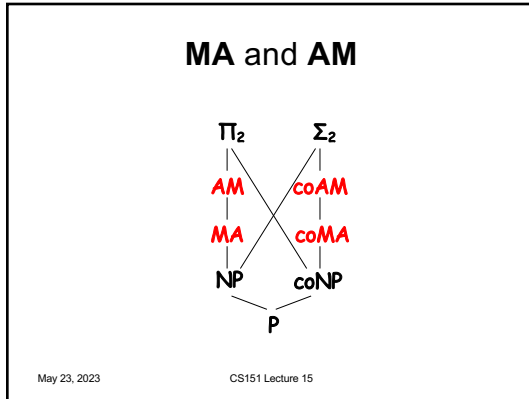

$$x \in L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] \leq \frac{1}{2}$$
- Relation to other complexity classes:
  - both contain **NP** (can elect to not use randomness)
  - both contained in  $\Pi_2$ .  $L \in \Pi_2$  iff  $\exists R \in \mathbf{P}$  for which:
 
$$x \in L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] < 1$$
  - so clear that  $\mathbf{AM} \subseteq \Pi_2$
  - know that  $\mathbf{MA} \subseteq \mathbf{AM}$

May 23, 2023 CS151 Lecture 15

6

7

### MA and AM

**Theorem:**  $\text{coNP} \subseteq \text{AM} \Rightarrow \text{PH} = \text{AM}$ .

- Proof:
  - suffices to show  $\Sigma_2 \subseteq \text{AM}$  (and use  $\text{AM} \subseteq \Pi_2$ )
  - $L \in \Sigma_2$  iff  $\exists$  poly-time language  $R$ 

$$x \in L \Rightarrow \exists y \forall z (x, y, z) \in R$$

$$x \notin L \Rightarrow \forall y \exists z (x, y, z) \notin R$$
  - Merlin sends  $y$
  - 1 AM exchange decides **coNP** query:  $\forall z (x, y, z) \in R$ ?
  - 3 rounds; in **AM**

May 23, 2023 CS151 Lecture 15

8

### MA and AM

- We know **Arthur-Merlin = IP**.
  - “public coins = private coins”
- Theorem (GS):**  $\text{IP}[k] \subseteq \text{AM}[O(k)]$ 
  - stronger result
  - implies for all constant  $k \geq 2$ ,
 
$$\text{IP}[k] = \text{AM}[O(k)] = \text{AM}[2]$$
- So,  $\text{GNI} \in \text{IP}[2] = \text{AM}$

May 23, 2023 CS151 Lecture 15

9

### Back to Graph Isomorphism

- The payoff:
  - not known if GI is **NP**-complete.
  - previous Theorems:
    - if GI is **NP**-complete then **PH = AM**
  - unlikely!
  - Proof: **GI NP-complete**  $\Rightarrow$  **GNI coNP-complete**

$$\Rightarrow \text{coNP} \subseteq \text{AM} \Rightarrow \text{PH} = \text{AM}$$

May 23, 2023 CS151 Lecture 15

10

### MA and AM

- Two important classes:
  - **MA = MA[2]**
  - **AM = AM[2]**
- definitions without reference to interaction:
  - $L \in \text{MA}$  iff  $\exists$  poly-time language  $R$ 

$$x \in L \Rightarrow \exists m \Pr_r[(x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \forall m \Pr_r[(x, m, r) \in R] \leq \frac{1}{2}$$
  - $L \in \text{AM}$  iff  $\exists$  poly-time language  $R$ 

$$x \in L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \Pr_r[\exists m (x, m, r) \in R] \leq \frac{1}{2}$$

May 23, 2023 CS151 Lecture 15

11

12

### Derandomization revisited

- $L \in \mathbf{MA}$  iff  $\exists$  poly-time language  $R$ 
  - $x \in L \Rightarrow \exists m \Pr_r[(x, m, r) \in R] = 1$
  - $x \notin L \Rightarrow \forall m \Pr_r[(x, m, r) \in R] \leq \frac{1}{2}$
- Recall PRGs:
 
  - for all circuits  $C$  of size at most  $s$ :
 
$$|\Pr_y[C(y) = 1] - \Pr_z[C(G(z)) = 1]| \leq \epsilon$$

AM  
MA  
NP

May 23, 2023 CS151 Lecture 15

13

### Using PRGs for MA

- $L \in \mathbf{MA}$  iff  $\exists$  poly-time language  $R$ 
  - $x \in L \Rightarrow \exists m \Pr_r[(x, m, r) \in R] = 1$
  - $x \notin L \Rightarrow \forall m \Pr_r[(x, m, r) \in R] \leq \frac{1}{2}$
- produce poly-size circuit  $C$  such that
 
$$C(x, m, r) = 1 \Leftrightarrow (x, m, r) \in R$$
- for each  $x, m$  can hardwire to get  $C_{x,m}$ 
  - $\exists m \Pr_y[C_{x,m}(y) = 1] = 1$  ("yes")
  - $\forall m \Pr_y[C_{x,m}(y) = 1] \leq 1/2$  ("no")

May 23, 2023 CS151 Lecture 15

14

### Using PRGs for MA

- can compute  $\Pr_z[C_{x,m}(G(z)) = 1]$  exactly
  - evaluate  $C_{x,m}(G(z))$  on every seed  $z \in \{0, 1\}^t$
  - running time  $(O(|C_{x,m}|) + (\text{time for } G))^t$
- $x \in L \Rightarrow \exists m [\Pr_z[C_{x,m}(G(z)) = 1] = 1]$
- $x \notin L \Rightarrow \forall m [\Pr_z[C_{x,m}(G(z)) = 1] \leq \frac{1}{2} + \epsilon]$
- $L \in \mathbf{NP}$  if PRG with  $t = O(\log n)$ ,  $\epsilon < 1/2$

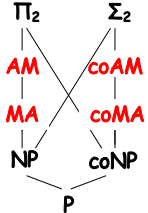

**Theorem:**  $\mathbf{E}$  requires exponential size circuits  $\Rightarrow \mathbf{MA} = \mathbf{NP}$ .

May 23, 2023 CS151 Lecture 15

### MA and AM

(under a hardness assumption)

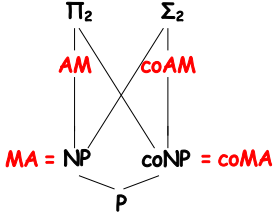

May 23, 2023 CS151 Lecture 15

16

### MA and AM

(under a hardness assumption)

What about AM, coAM?

May 23, 2023 CS151 Lecture 15

17

### Derandomization revisited

**Theorem** (IW, STV): If  $\mathbf{E}$  contains functions that require size  $2^{\Omega(n)}$  circuits, then  $\mathbf{E}$  contains functions that are  $2^{\Omega(n)}$ -unapproximable by circuits.

**Theorem** (NW): if  $\mathbf{E}$  contains  $2^{\Omega(n)}$ -unapproximable functions there are poly-time PRGs fooling poly( $n$ )-size circuits, with seed length  $t = O(\log n)$ , and error  $\epsilon < 1/4$ .

May 23, 2023 CS151 Lecture 15

18

### Oracle circuits

- circuit C**
  - directed acyclic graph
  - nodes: AND ( $\wedge$ ); OR ( $\vee$ ); NOT ( $\neg$ ); variables  $x_i$
- A-oracle circuit C**
  - also allow “A-oracle gates”

May 23, 2023 CS151 Lecture 15

19

### Relativized versions

**Theorem:** If  $E$  contains functions that require size  $2^{\Omega(n)}$  A-oracle circuits, then  $E$  contains functions that are  $2^{\Omega(n)}$ -unapproximable by A-oracle circuits.

- Recall proof:
  - encode truth table to get hard function
  - if approximable by  $s(n)$ -size circuits, then use those circuits to compute original function by size  $s(n)^{O(1)}$ -size circuits. Contradiction.

May 23, 2023 CS151 Lecture 15

20

### Relativized versions

May 23, 2023 CS151 Lecture 15

21

### Relativized versions

**Theorem:** if  $E$  contains  $2^{\Omega(n)}$ -unapproximable fns., there are poly-time PRGs fooling poly( $n$ )-size A-oracle circuits, with seed length  $t = O(\log n)$ , and error  $\epsilon < 1/4$ .

- Recall proof:
  - PRG from hard function on  $O(\log n)$  bits
  - if doesn't fool  $s$ -size circuits, then use those circuits to compute hard function by size  $s \cdot n^c$ -size circuits. Contradiction.

May 23, 2023 CS151 Lecture 15

22

### Relativized versions

$$G_n(y) = f_{\log n}(y_{|S_1}) \circ f_{\log n}(y_{|S_2}) \circ \dots \circ f_{\log n}(y_{|S_m})$$

$f_{\log n}$ : 010100101111101010111001010

- doesn't fool A-oracle circuit of size  $s$ :
 
$$|\Pr_x[C(x) = 1] - \Pr_y[C(G_n(y)) = 1]| > \epsilon$$
- implies A-oracle circuit  $P$  of size  $s' = s + O(m)$ :
 
$$\Pr_y[P(G_n(y)_{1..s'}) = G_n(y)] > 1/2 + \epsilon/m$$

May 23, 2023 CS151 Lecture 15

23

### Relativized versions

$$G_n(y) = f_{\log n}(y_{|S_1}) \circ f_{\log n}(y_{|S_2}) \circ \dots \circ f_{\log n}(y_{|S_m})$$

$f_{\log n}$ : 010100101111101010111001010

May 23, 2023 CS151 Lecture 15 hardwired tables

24

## Using PRGs for AM

$L \in \text{AM}$  iff  $\exists$  poly-time language  $R$

$$x \in L \Rightarrow \Pr_r[\exists m(x, m, r) \in R] = 1$$

$$x \notin L \Rightarrow \Pr_r[\exists m(x, m, r) \in R] \leq \frac{1}{2}$$

- produce poly-size **SAT-oracle circuit**  $C$  such that  $\begin{cases} \text{1 SAT query, accepts iff answer is "yes"} \\ C(x, r) = 1 \Leftrightarrow \exists m(x, m, r) \in R \end{cases}$

$$C(x, r) = 1 \Leftrightarrow \exists m(x, m, r) \in R$$

- for each  $x$ , can hardwire to get  $C_x$

$$\Pr_y[C_x(y) = 1] = 1 \quad (\text{"yes"})$$

$$\Pr_y[C_x(y) = 1] \leq \frac{1}{2} \quad (\text{"no"})$$

May 23, 2023

CS151 Lecture 15

25

## Using PRGs for AM

$$x \in L \Rightarrow [\Pr_z[C_x(G(z)) = 1] = 1]$$

$$x \notin L \Rightarrow [\Pr_z[C_x(G(z)) = 1] \leq \frac{1}{2} + \epsilon]$$

- $C_x$  makes a *single* SAT query, accepts iff answer is "yes"
- if  $G$  is a PRG with  $t = O(\log n)$ ,  $\epsilon < \frac{1}{4}$ , can check in NP:
  - does  $C_x(G(z)) = 1$  for all  $z$ ?

May 23, 2023

CS151 Lecture 15

26

## Relativized versions

**Theorem:** If  $\mathbf{E}$  contains functions that require size  $2^{\Omega(n)}$  **A-oracle circuits**, then  $\mathbf{E}$  contains functions that are  $2^{\Omega(n)}$ -unapproximable by **A-oracle circuits**.

**Theorem:** if  $\mathbf{E}$  contains  $2^{\Omega(n)}$ -unapproximable functions there are PRGs fooling poly( $n$ )-size **A-oracle circuits**, with seed length  $t = O(\log n)$ , and error  $\epsilon < \frac{1}{2}$ .

**Theorem:** **E** requires exponential size **SAT-oracle circuits**  $\Rightarrow \mathbf{AM} = \mathbf{NP}$ .

## New topic(s)

Optimization problems,  
Approximation Algorithms,  
and  
Probabilistically Checkable Proofs

May 23, 2023

CS151 Lecture 15

30

## Optimization Problems

- many hard problems (especially **NP**-hard) are **optimization** problems
  - e.g. find *shortest* TSP tour
  - e.g. find *smallest* vertex cover
  - e.g. find *largest* clique
- may be minimization or maximization problem
- “opt” = value of optimal solution

May 23, 2023

CS151 Lecture 15

31

## Approximation Algorithms

- often happy with **approximately optimal** solution
  - warning: lots of heuristics
  - we want **approximation algorithm** with guaranteed **approximation ratio** of  $r$
  - meaning: on every input  $x$ , output is guaranteed to have value
    - at most  $r \cdot \text{opt}$  for minimization**
    - at least  $\text{opt}/r$  for maximization**

May 23, 2023

CS151 Lecture 15

32

## Approximation Algorithms

- Example approximation algorithm:
  - Recall:

**Vertex Cover (VC)**: given a graph  $G$ , what is the *smallest* subset of vertices that touch every edge?

- **NP**-complete

May 23, 2023

CS151 Lecture 15

33

## Approximation Algorithms

- Approximation algorithm for VC:
  - pick an edge  $(x, y)$ , add vertices  $x$  and  $y$  to VC
  - discard edges incident to  $x$  or  $y$ ; repeat.
- Claim: **approximation ratio is 2**.
- Proof:
  - an optimal VC must include at least one endpoint of each edge considered
  - therefore  $2 \cdot \text{opt} \geq \text{actual}$

May 23, 2023

CS151 Lecture 15

34

## Approximation Algorithms

- diverse array of ratios achievable
- some examples:
  - (min) **Vertex Cover**: **2**
  - **MAX-3-SAT** (find assignment satisfying largest # clauses):  **$8/7$**
  - (min) **Set Cover**:  **$\ln n$**
  - (max) **Clique**:  **$n/\log^2 n$**
  - (max) **Knapsack**:  **$(1 + \epsilon)$  for any  $\epsilon > 0$**

May 23, 2023

CS151 Lecture 15

35

## Approximation Algorithms

(max) **Knapsack**:  **$(1 + \epsilon)$  for any  $\epsilon > 0$**

- called **Polynomial Time Approximation Scheme (PTAS)**
  - algorithm runs in poly time for every fixed  $\epsilon > 0$
  - poor dependence on  $\epsilon$  allowed
- If all **NP** optimization problems had a PTAS, almost like **P = NP** (!)

May 23, 2023

CS151 Lecture 15

36

## Approximation Algorithms

- A job for complexity: **How to explain failure to do better than ratios on previous slide?**
  - just like: how to explain failure to find poly-time algorithm for SAT...
  - first guess: probably NP-hard
  - what is needed to show this?
- “gap-producing” reduction from NP-complete problem  $L_1$  to  $L_2$

May 23, 2023

CS151 Lecture 15

37

## Approximation Algorithms

- “gap-producing” reduction from NP-complete problem  $L_1$  to  $L_2$

May 23, 2023

CS151 Lecture 15

38

## Gap producing reductions

- **r-gap-producing reduction:**
  - $f$  computable in poly time
  - $x \in L_1 \Rightarrow \text{opt}(f(x)) \leq k$
  - $x \notin L_1 \Rightarrow \text{opt}(f(x)) > rk$
  - for max. problems use “ $\geq k$ ” and “ $< k/r$ ”
- Note: target problem is not a language
  - **promise problem** (yes  $\cup$  no *not* all strings)
  - “promise”: instances always from (yes  $\cup$  no)

May 23, 2023

CS151 Lecture 15

39

## Gap producing reductions

- Main purpose:
  - $r$ -approximation algorithm for  $L_2$  distinguishes between  $f(\text{yes})$  and  $f(\text{no})$ ; can use to decide  $L_1$
  - “NP-hard to approximate to within  $r$ ”

May 23, 2023

CS151 Lecture 15

40

## Gap preserving reductions

- gap-producing reduction difficult (more later)
- but **gap-preserving reductions** easier

Warning: many reductions **not** gap-preserving

May 23, 2023

CS151 Lecture 15

41

## Gap preserving reductions

- Example **gap-preserving reduction:**
  - reduce MAX-k-SAT with gap  $\epsilon$  constants
  - to MAX-3-SAT with gap  $\epsilon'$  constants
  - “MAX-k-SAT is NP-hard to approx. within  $\epsilon \Rightarrow$  MAX-3-SAT is NP-hard to approx. within  $\epsilon'$ ”
- **MAXSNP** (PY) – a class of problems reducible to each other in this way
  - PTAS for MAXSNP-complete problem iff PTAS for all problems in MAXSNP

May 23, 2023

CS151 Lecture 15

42

## MAX-k-SAT

- Missing link: **first gap-producing reduction**
  - history's guide
    - it should have something to do with SAT
- Definition: **MAX-k-SAT with gap  $\epsilon$** 
  - instance: **k-CNF  $\phi$**
  - YES: **some assignment satisfies all clauses**
  - NO: **no assignment satisfies more than  $(1 - \epsilon)$  fraction of clauses**

May 23, 2023

CS151 Lecture 15

43

## Proof systems viewpoint

- **k-SAT NP-hard**  $\Rightarrow$  for any language  $L \in \mathbf{NP}$  proof system of form:
  - given  $x$ , compute reduction to k-SAT:  $\phi_x$
  - expected proof is **satisfying assignment for  $\phi_x$**
  - verifier picks **random clause** ("local test") and checks that it is satisfied by the assignment
    - $x \in L \Rightarrow \Pr[\text{verifier accepts}] = 1$
    - $x \notin L \Rightarrow \Pr[\text{verifier accepts}] < 1$

May 23, 2023

CS151 Lecture 15

44

## Proof systems viewpoint

- **MAX-k-SAT with gap  $\epsilon$  NP-hard**  $\Rightarrow$  for any language  $L \in \mathbf{NP}$  proof system of form:
  - given  $x$ , compute reduction to MAX-k-SAT:  $\phi_x$
  - expected proof is **satisfying assignment for  $\phi_x$**
  - verifier picks **random clause** ("local test") and checks that it is satisfied by the assignment
    - $x \in L \Rightarrow \Pr[\text{verifier accepts}] = 1$
    - $x \notin L \Rightarrow \Pr[\text{verifier accepts}] \leq (1 - \epsilon)$
  - can repeat  $O(1/\epsilon)$  times for error  $< 1/2$

May 23, 2023

CS151 Lecture 15

45

## Proof systems viewpoint

- can think of **reduction** showing k-SAT NP-hard as **designing a proof system** for **NP** in which:
  - verifier only performs local tests
- can think of **reduction** showing "MAX-k-SAT with gap  $\epsilon$ " NP-hard as **designing a proof system** for **NP** in which:
  - verifier only performs local tests
  - invalidity of proof\* evident all over: "holographic proof" and an  $\epsilon$  fraction of tests notice such invalidity

May 23, 2023

CS151 Lecture 15
