Pumping Lemma for CFLs

CFL Pumping Lemma: Let L be a CFL. There exists an integer p ("pumping length") for which every $w \in L$ with $|w| \geq p$ can be written as

$$w = uvxyz \quad \text{such that}$$

1. for every $i \geq 0$, $uv^ixy^iz \in L$, and
2. $|vy| > 0$, and
3. $|vxy| \leq p$.

3

CFL Pumping Lemma Example

Theorem: the following language is not context-free:

$$L = \{a^n b^n c^n : n \geq 0\}.$$

- Proof:
 - let p be the pumping length for L
 - choose $w = a^p b^p c^p$
 - $w = aaaa\dots abbbb\dots bcccc\dots c$
 - $w = uvxyz$, with $|vy| > 0$ and $|vxy| \leq p$.

4

CFL Pumping Lemma Example

– possibilities:

$$w = aaaa\dots \underbrace{aa}_{u} \underbrace{abb}_{v} \underbrace{bb}_{x} \underbrace{cccc}_{y} \dots c_z$$

(if v, y each contain only one type of symbol, then pumping on them produces a string not in the language)

5

CFL Pumping Lemma Example

– possibilities:

$$w = aaaa\dots \underbrace{ab}_{u} \underbrace{bbb}_{v} \underbrace{bb}_{x} \underbrace{cccc}_{y} \dots c_z$$

(if v, y contain more than one type of symbol, then pumping on them might produce a string with equal numbers of a's, b's, and c's – if vy contains equal numbers of a's, b's, and c's. But they will be out of order.)

CFL Pumping Lemma Example

Theorem: the following language is not context-free:

$$L = \{xx : x \in \{0,1\}^*\}.$$

- Proof:
 - let p be the pumping length for L
 - try $w = 0^p 1 0^p 1$
 - can this be pumped?

January 23, 2023

CS21 Lecture 8

7

7

CFL Pumping Lemma Example

$$L = \{xx : x \in \{0,1\}^*\}.$$

- try $w = 0^{2p} 1^{2p} 0^{2p} 1^{2p}$
- $w = uvxyz$, with $|vy| > 0$ and $|vxy| \leq p$.
- case: vxy in first half.
 - then $uv^2xy^2z = 0^{2p} \dots ? 1^{2p} \dots ?$
- case: vxy in second half.
 - then $uv^2xy^2z = ?? \dots ? 0^{2p} \dots ? 1^{2p}$
- case: vxy straddles midpoint
 - then $uv^i xy^j z = uxz = 0^{2p} 1^i 0^{2p} 1^j$ with $i \neq 2p$ or $j \neq 2p$

9

9

CFL Pumping Lemma

Proof: consider a parse tree for a very long string $w \in L$:

CS21 Lecture 8

12

12

CFL Pumping Lemma

- how large should pumping length p be?
- need to ensure other conditions:
 - $|vy| > 0$
 - $|vxy| \leq p$
- $b = \max$ # symbols on rhs of any production (assume $b \geq 2$)
- if parse tree has height $\leq h$, then string generated has length $\leq b^h$ (so length $> b^h$ implies height $> h$)

January 23, 2023

CS21 Lecture 8

13

13

CFL Pumping Lemma

- let m be the # of nonterminals in the grammar
- to ensure path of length at least $m+2$, require
 - $|w| \geq p = b^{m+2}$
- since $|w| > b^{m+1}$, any parse tree for w has height $> m+1$
- let T be the **smallest** parse tree for w
- longest root-leaf path must consist of $\geq m+1$ non-terminals and 1 terminal.

January 23, 2023

CS21 Lecture 8

14

14

CFL Pumping Lemma

- must be a repeated non-terminal A on long path
- select a repetition among the **lowest** $m+1$ non-terminals on path.
- pictures show that for every $i \geq 0$, $uv^ixy \in L$
- is $|vy| > 0$?
 - smallest parse tree T ensures
- is $|vxy| \leq p$?
 - red path has length $\leq m+2$, so $\leq b^{m+2} = p$ leaves

15

15

Chomsky Normal Form

- Useful to deal only with CFGs in a simple **normal form**
- Most common: **Chomsky Normal Form (CNF)**
- Definition: every production has form
 - $A \rightarrow BC$ or $S \rightarrow \epsilon$ or $A \rightarrow a$
- where A, B, C are any non-terminals (and B, C are not S) and a is any terminal.

16

16

Chomsky Normal Form

Theorem: Every CFL is generated by a CFG in Chomsky Normal Form.

Proof: exercise or in book...

January 23, 2023

CS21 Lecture 8

17

17

Deciding CFLs

- Useful to have an **efficient algorithm** to decide whether string x is in given CFL
 - e.g. programming language often described by CFG. Determine if string is valid program.
- If CFL recognized by **deterministic PDA**, just simulate the PDA.
 - but not all CFLs are (homework)...
- Can simulate NPDA, but this takes **exponential time** in the worst case.

January 23, 2023

CS21 Lecture 8

18

18

Deciding CFLs

- Convert CFG into **Chomsky Normal Form**
- parse tree for string x generated by nonterminal A :

If $A \rightarrow^k x$ ($k > 1$) then there must be a way to split x :

$$x = yz$$

- $A \rightarrow BC$ is a production and
- $B \rightarrow^i y$ and $C \rightarrow^j z$ for $i, j < k$

January 23, 2023

CS21 Lecture 8

19

19

Deciding CFLs

- An algorithm:
 - IsGenerated(x, A)**
 - if $|x| = 1$, then return YES if $A \rightarrow x$ is a production, else return NO
 - for all $n-1$ ways of splitting $x = yz$
 - for all $\leq m$ productions of form $A \rightarrow BC$
 - if IsGenerated(y, B) and IsGenerated(z, C), return YES
 - return NO
- worst case running time?

January 23, 2023

CS21 Lecture 8

20

20

Deciding CFLs

- worst case running time **$\exp(n)$**
- Idea: avoid recursive calls
 - build table of YES/NO answers to calls to IsGenerated, in order of length of substring
 - example of general algorithmic strategy called **dynamic programming**
 - notation: $x[i, j]$ = substring of x from i to j
 - table: $T(i, j)$ contains
 - $\{A: A \text{ nonterminal such that } A \rightarrow^* x[i, j]\}$**

Deciding CFLs

IsGenerated($x = x_1x_2x_3 \dots x_n, G$)

```

for i = 1 to n
  T[i, i] = {A: "A → xi" is a production in G}
for k = 1 to n - 1
  for i = 1 to n - k
    for k splittings  $x[i, i+k] = x[i, i+j]x[i+j+1, i+k]$ 
      T[i, i+k] = {A: "A → BC" is a production
                  in G and B ∈ T[i, i+j] and
                  C ∈ T[i+j+1, i+k] }
output "YES" if S ∈ T[1, n], else output "NO"
```

January 23, 2023

CS21 Lecture 8

22

22

Deciding CFLs

```

IsGenerated( $x = x_1x_2x_3 \dots x_n, G$ )
for i = 1 to n
  T[i, i] = {A: "A → xi" is a production in G}
for k = 1 to n - 1
  for i = 1 to n - k
    for k splittings  $x[i, i+k] = x[i, i+j]x[i+j+1, i+k]$ 
      T[i, i+k] = {A: "A → BC" is a production
                  in G and B ∈ T[i, i+j] and
                  C ∈ T[i+j+1, i+k] }
output "YES" if S ∈ T[1, n], else output "NO"
```

$O(nm)$ steps (points to the inner loop)

$O(n^3m^3)$ steps (points to the entire algorithm)
